

## 1. Manage and mitigate climate-related risks to financial stability...

... through regular risk monitoring, stress testing, and assessing the need for macroprudential measures.

## 2. Ensure proper green disclosures by financial market participants....

... by working with strategic partners to increase and improve the quantity, quality, and availability of climate-related data.

## 3. Reduce the environmental impact of cash...

... by introducing rounding of the final sum of purchase in cash and reducing the number of 1 and 2 euro cent coins in circulation.

## 4. Ensure the environmental sustainability of Bank of Lithuania daily operations...

...by reducing the organisational carbon footprint.

## 5. Increase green investments in Bank of Lithuania financial portfolio...

...by considering the supply of green financial instruments and the three main principles for investing Bank of Lithuania financial assets - safety, liquidity, and return.
