## **Publication of Statistical Data on Loans to Non-financial Corporations by Economic Activity**

As of today the Bank of Lithuania will begin to publish on its external webpage statistical data on outstanding amounts at the end-of-period of loans of other monetary financial institutions to resident non-financial corporations by economic activity. Data, beginning from the third quarter of 2011, are published for fourteen different categories based on EVRK Rev. 2 sections.

These data complement data of the MFIs Balance Sheet and Monetary Statistics; these are based on statistical data collected in accordance with Resolution No. 46 of the Board of the Bank of Lithuania of 8 May 2003 “On Balance Sheet Statistical Reporting by Monetary Financial Institutions”. As a breakdown of loans by economic activity is not required, the present dataset combines data from the Loan Risk Database, which is under control of the Bank of Lithuania, with information from the Economic Entities Registry of the Lithuanian Department of Statistics.

The Bank of Lithuania used to disseminate similar data. Data on [amounts outstanding of loans by economic activities](#) were being published from 1995 till 2004, whereas data on [structure of loans by economic activities](#) from the fourth quarter of 2004 till the third quarter of 2011. These data were being prepared using data reported by banks, and information provided to the Loan Risk Database about economic activity, the implementation of which required a loan (it should be noted that the entity can perform a number of activities). The Rules for Managing the Loan Risk Database were changed and credit institutions do not provide information on economic activity, for which the loan was provided, since November of 2011. Consequently the data released today are based on information from the Economic Entities Registry about the principal economic activity of the legal persons.

Statistical data are published [here](#) and methodological notes [here](#).
